Today's Water Supply Mix

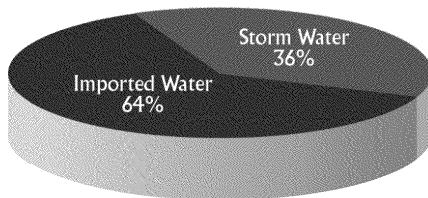

2020
District's Vision

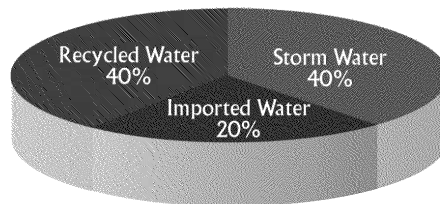

Local Projects – Water Replenishment District of Southern California

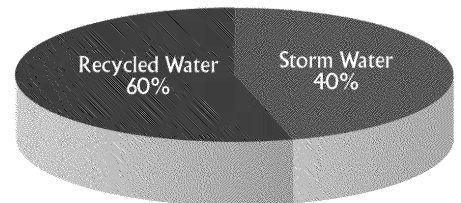

Past

Present

Future

- Past – 100% dependent on imported water except storm water
- Present (to date) – advanced recycled water treatment facilities reduce imported water to one-third of historic levels
- Future (now) – completion of Groundwater Reliability Improvement Program (GRIP) and other local projects eliminates demand for imported water
- There is no scenario in which demand for imported water will (or should) trend up
